

**ABSTRACT**

**"A method of handling a data request"**

5 A method of handling a data request by exporting data from at least one database to  
at least one receiver via an intermediary server, the intermediary server comprising at  
least one database adapter and a memory buffer for temporary storage of data, the  
method including the steps of transmitting a data request to the database, retrieving  
10 the data from the database and assigning it with a unique ID, transmitting the data  
and the unique ID to the intermediary server, passing the data through the database  
adapter to transform the data into receiver readable format and transmitting the  
transformed data and unique ID number to the receiver when the receiver is next  
15 enabled to receive the data. There is furthermore provided a computer implemented  
system for accessing databases operated by independent electronic processing  
devices.
